PROFISTAR SERIES SUBSURFACE AERATION

The ProfiStar series is an innovative development from Metasa that significantly simplifies the cultivation and maintenance of crops. The extremely sturdy base frame enables thorough deep loosening with a penetration depth of up to 500 mm. The disc harrow, deep tine, and crumpler roller form a perfectly coordinated unit. All tilling components are individually height-adjustable, ensuring optimal results. The track widths can also be easily adjusted to the desired row spacing. The robust construction, along with the powder coating and galvanization of the working parts, make the ProfiStar series an indispensable piece of equipment.
