

The short-disc harrow from the ProfiStar series is suitable for asparagus cultivation, viticulture and fruit growing. Its compact design makes it suitable for a wide range of applications. In asparagus cultivation, it can be used for maintenance and weed control in both young and mature crops. The spring-mounted disc design, featuring rubber bearings and spring elements, ensures smooth operation. Discs with a diameter of 510 mm or 560 mm are fitted as standard. Height adjustment and reconsolidation are handled by the 500 mm diameter Krümmmler roller. The machine is powder-coated and partially galvanised.
